## TECHNICAL SKILLS

**GenAI & LLMs:** LangGraph, LangChain, RAG, LLM Fine-tuning (LoRA/QLoRA), RAGAS Evaluation, LangFuse, Agentic AI, Hugging Face Transformers, PEFT

**ML & Deep Learning:** PyTorch, scikit-learn, XGBoost, model training & evaluation, feature engineering

**MLOps & Platforms:** Docker, Apache Airflow, FastAPI, GitHub Actions, CI/CD, SAP BTP

**Data & Integration:** PostgreSQL, pgvector, SQL, REST APIs, ETL pipelines, Data Modeling

**Monitoring & Quality:** LangFuse, Grafana, drift detection, LLM observability

**Platforms:** SAP BTP, SAP HANA, SAP Build Work Zone

**Language:** English (C1), German (B1)

## PROFESSIONAL EXPERIENCE

### Working Student - Product and Solution Learning

07/2025 - 03/2026

*SAP, Walldorf, Germany*

- Automated extraction and classification of 12,000+ trainer feedback records using Python, reducing manual reporting effort by ~90%
- Maintained course metadata, skill tags, and product mappings across 1,000+ learning assets to ensure portfolio accuracy
- Conducted course lifecycle reviews to retire deprecated courses, migrate content across platforms, and perform quality checks by validating objectives, structure, and link integrity before go-live
- Collaborated with stakeholders across Germany, UK, US, and India to identify reporting needs and improve operational processes
- Maintained the team's internal knowledge portal on SAP Build Work Zone, organising documentation, trackers, and reporting templates for cross-regional access

### Technical Intern - Documentation and Tooling

10/2024 - 12/2024

*Bosch Research, Stuttgart, Germany*

- Created structured technical documentation for 8+ REST APIs used in engineering simulation workflows, reducing onboarding time for new team members by standardising knowledge transfer processes
- Built a Confluence knowledge base integrating API specs, workflow diagrams, and runbooks; adopted as the team's primary onboarding resource

### Assistant Product Specialist

11/2023 - 03/2024

*Bosch, Bangalore, India*

- Analyzed customer feedback and usage data to identify trends and recommend product improvements
- Collaborated with product, engineering, and QA teams to support feature rollouts and operational improvements
- Built Power BI dashboards tracking workshop performance and business KPIs across 20+ locations
- Supported evaluation and validation of digital solutions used in customer-facing workflows

### Software Developer Apprentice

10/2022 - 10/2023

*Bosch, Bangalore, India*

- Developed backend database schemas and supported REST API development for Industry 4.0 analytics initiatives
- Optimised SQL queries and indexing across PostgreSQL/MySQL, reducing data retrieval latency by approximately 30%
- Built Power BI dashboards using SAP S/4HANA logistics data to monitor inventory, order flow, and delivery performance
- Contributed to full software development lifecycle in an Agile team — sprint planning, code reviews, debugging, and production deployments

## EDUCATION

### MSc Applied Computer Science — SRH Hochschule Heidelberg

CGPA: 1.6 | 2024 - 2026

*Relevant Coursework:* International Project Management, Applied AI, Advanced Databases, Software Architecture, SAP HANA, IT Security

## TECHNICAL PROJECTS

---

### Master Thesis - LLM-Powered Root Cause Analysis of Industrial Sensor Data Pipelines (03/2026)

*Python, PostgreSQL, Docker, Airflow, RAG, LangGraph, pgvector, Streamlit*

- Designed and built an Agentic AI platform using LangGraph multi-agent orchestration, RAG over pgvector embeddings, and multi-model LLM routing to automate failure diagnosis across industrial sensor pipelines by reducing manual root cause investigation time by over 70%
- Engineered retrieval pipelines combining vector similarity search and contextual log analysis, implemented RAGAS-based evaluation, achieving >85% faithfulness and answer relevance scores across 500+ test queries
- Developed automated evaluation workflows measuring agent reliability across 12 failure scenario categories and findings contributed to a reproducible benchmark for industrial LLM agent assessment

### Domain Adapted LLM for Industrial Fault Diagnosis (Fine-tuning extension of Thesis) *Python, PyTorch, Hugging Face*

*Transformers, PEFT/QLoRA, Mistral 7B, LangChain, Streamlit*

- Fine-tuned Mistral 7B using QLoRA (4-bit quantisation + LoRA adapters) on 8,000+ industrial maintenance logs and fault descriptions, reducing domain hallucination rate from 18% to 4% on industrial terminology
- Integrated the fine-tuned model as a specialist reasoning node within the thesis LangGraph system, replacing general-purpose LLM calls for fault classification tasks
- Built a Streamlit comparison dashboard showing base vs. fine-tuned model outputs on sensor anomaly prompts
- Packaged training pipeline with reproducible configs (BitsAndBytes + PEFT), pushed fine-tuned adapters to Hugging Face Hub, and documented end-to-end fine-tuning workflow for team reuse

## CERTIFICATIONS

---

SAP Analytics Cloud - SAP Certification (03/2026) | SAP Build Developer - SAP Certification (10/2025) | SAP BTP - SAP Training (10/2025) Docker Mastery (Kubernetes + Swarm) - Udemy (08/2024) | SQL for Beginners - Udemy (09/2022)
